THE ENERGY EXPERTS YOU KNOW.

THE ENERGY EXPERTISE YOU NEED.

Reese-Colston— Real-World Training for a New Energy Environment

At no other time have workforces in the energy industry been pressured to create more tangible value for their organizations than today. Conversely, employers must operate smarter and tighter by investing in their people to ensure the decisions they make today will result in positive bottom line results tomorrow.

Reese-Colston Energy Training understands this new energy environment. Individually, our educators have taught every Fortune 500 energy company in the nation, delivering not only fundamental and advanced knowledge across the energy spectrum, but real-world insight and personal experience that employers and employees alike can put to work in their daily jobs.

Collectively, we've instructed thousands of professionals and non-professionals who work in the energy or energy-related fields—from independent producers to the largest energy and financial corporations.

RCT offers a unique curriculum of higher learning and specialized training you won't find anywhere else from educators who not only talk-the-talk but walk-the-walk every single day.

- Broad range of energy-related courses for virtually every level of employee—from beginner to professional—to meet the growing challenges of a turbulent market;
- Certified and accredited programs in natural gas, midstream, energy marketing, petroleum refining, contracts and negotiation, hedging, electrical power, alternative energy sources, and more;
- Seminars and training programs led by the nation's top energy experts in their field;
- Public seminars held year round;
- On-premise seminars and training programs can be customized and client-specific;
- Web-based training programs and distance learning.

A Unique Curriculum of Energy Courses to Master the Energy Complex

Natural Gas

Mastering Natural Gas Basics

The essential seminar for understanding the basic elements of the natural gas industry—from the wellhead to the burner tip and all points in between.

Mastering Gas Processing Contracts and Negotiation

This course offers key strategies for successfully negotiating natural gas contracts. Ideal for midstream companies that want to develop midstream assets, new hires in the process arena, executives and mid-level management, accounting personnel and division order staff.

Mastering Natural Gas Hedging

What is a futures contract? How does it work all the way to swaps and options? This course offers the fundamentals on hedging natural gas price risk through the use of derivatives. Test your knowledge with real-world scenarios where attendees manage their own natural gas hedging portfolios.

Mastering FAS 133

Now financial professionals can gain real-world insight into the complex world of FASB. For those who must manage the reporting of energy-related derivatives and hedges, this seminar takes attendees through the entire process of complying with FAS-133.

Mastering Oil and Gas Calculations

Essential knowledge for the entry-level employee, landman, division order analyst or analysts returning to work in an energy company. This course offers A-Z instruction on the basic calculations of working, net revenue, overriding royalty and royalty interest with hands-on activities and a computer lab.

Petroleum Refining

Petroleum Refining in Non-technical Language

Based on the best-selling book, this course examines the key processes of a petroleum refinery—from the characteristics of crude oil and key refinery operations to the economics of refining.

Electrical Power

Mastering Electricity Basics

An essential seminar to understand the basic elements of the electrical power industry—from generation to transmission to the end user. Special emphasis is also placed on how other energy sector players, such as oil and gas, interact with the power industry.
